

Electronic Data Interchange Overview

Simplifying Secure Operations

EDI Experience

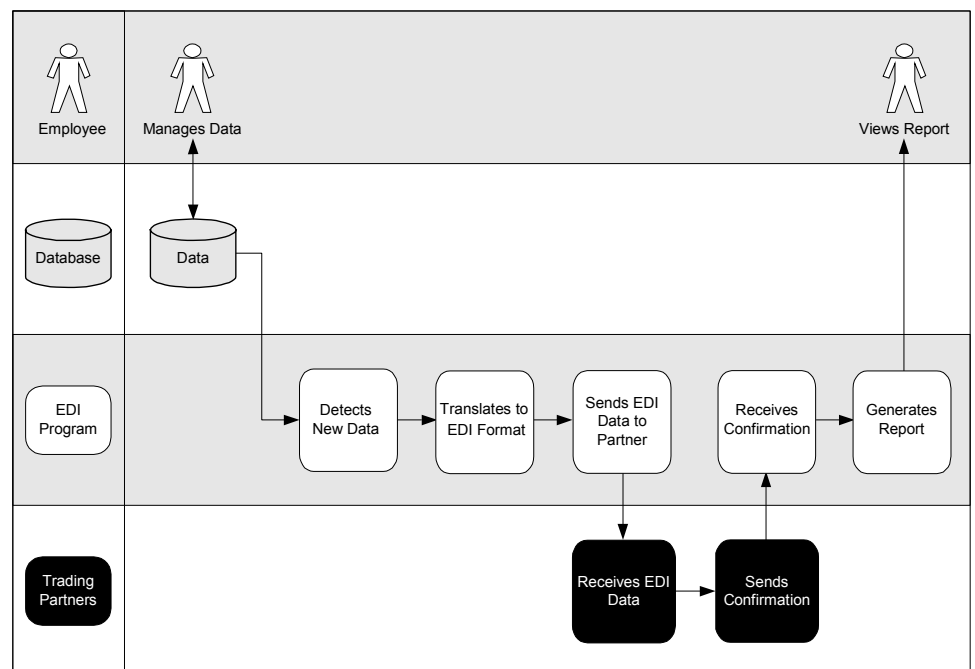

180i designs and develops Electronic Data Interchange (EDI) solutions according to your business needs. We can plan and build entire projects, including connecting to enterprise systems and trading partners, or provide one or more specific EDI specialists to work with your internal team. Either way, 180i provides you the experience to achieve your goals.

Our staff has experience on both simple and complex EDI infrastructures for companies such as Visa and others. We also can enable you to connect to standards such as XML, HIPPA and others.

Architecture

180i architects will ensure that mission-critical EDI systems run at the highest levels of security, reliability, availability and scalability. Each system is designed to achieve the maximum performance.

The following diagram illustrates a typical EDI business process flow:

Designated trademarks and brands are the property of their respective owners.

Robust Architectures with:

- Security
- Reliability
- Scalability
- Availability
- Performance
